Customer loyalty with increase in sales

Interchangeable energy supply

How it works

Embedded autonomous energy supply

Two Qi1001 wireless charging stations are embedded seamlessly in the table top and connected to the battery pack in the table leg. Thanks to this technology, our wireless charging table can be power supplied without external power connection.

Interchangeable energy supply

Qivolino is continuously energy-supplied. The empty battery can be replaced fast and easily. In the meantime the empty battery can be recharged and can be used again after 2 hours charging time.

Protection against acts of vandalism

The battery pack is secured by a safety lock and can only be accessed through it. So that your smart wireless charging table is protected against external damages.

Increase sales

Download our app and sell charging time to your customers by turning on and off the Qi1001 embedded charging transmitter.

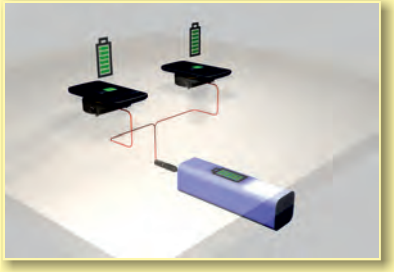

The system

The system embedded in your furniture

The Qinside wireless charging system can be embedded in any kind of furniture. Only two Qi1001 wireless charging stations, 2 battery packs are required for a continuous energy supply and a battery charger. Get today the innovative QInside charging system and offer your customers and guests unlimited charging capacity without any need of power connection. Perfect for outdoor use.
